PROFESSIONAL SUMMARY

Adaptable Software Engineering student in my final year of studies, can build across the full stack. Strong foundation in backend logic and database management, with practical experience delivering responsive user interfaces.

TECHNICAL SKILLS

- Backend & Databases: Python, PHP, SQL, C++, Java
- Frontend: Bootstrap, HTML, CSS, JavaScript
- Tools & Environments: GitHub

TECHNICAL PROJECTS

E-Commerce Marketplace | PHP, Bootstrap, SQL

Built a responsive, full-stack C2C e-commerce website to manage online transactions allowing users to create an account to buy items and register as a seller to sell items on the website to other users. Implemented Role-Based Access Control (RBAC) and admin panel to verify sellers, release funds, ban users and remove products that were listed.

Engineered the backend architecture using PHP to handle user authentication and secure data routing.

Designed the frontend with Bootstrap to ensure a smooth, cross-device user experience.

EDUCATION

BSc Information Technology: Software engineering

Eduvos

Expected Completion: November 2026
